SUMMARY

Full Stack Software Engineer and Technical Lead with 2+ years of experience building production web platforms with Node.js, TypeScript, React and Next.js across AWS and Google Cloud. Currently leading the architecture of an AI-powered hiring platform built on multi-stage Anthropic Claude agents, semantic search and event-driven workflows. Committed to clean, efficient code, reliable delivery and measurable system performance.

WORK EXPERIENCE

Technical Lead

06/2026 – Present

Palm Outsourcing

London, UK

- Designed and built an AI-powered hiring platform (Node.js, TypeScript, Express), orchestrating multi-stage Anthropic Claude agents for candidate intake, CV parsing, screening and matching at scale.
- Developed recruiter and candidate web apps with Next.js, React and TypeScript, deployed on Google Cloud Run through automated CI/CD pipelines with Cloud Build.
- Architected a semantic candidate-job matching engine using vector embeddings, vector search and cross-encoder reranking, significantly reducing LLM costs through a retrieval cascade.
- Optimized AI inference costs at scale with prompt caching and batch-processing APIs for efficient bulk candidate evaluation.
- Built an intelligent CV processing pipeline combining text extraction, vision-model fallback for image-based PDFs and validation heuristics.
- Built automated email and WhatsApp candidate communication workflows with cron jobs, event-driven webhooks and idempotent scheduling.
- Implemented resilient Notion API integrations with centralized rate limiting, retries and exponential backoff for large-scale data synchronization.
- Designed authentication and role-based access control (RBAC) with magic-link sign-in for Candidate, Employer and Admin user groups.
- Developed real-time employer-candidate messaging with unread indicators, presence tracking and job-specific conversation channels.
- Refactored a monolith into isolated services, removing bottlenecks between long-running AI workflows and user-facing operations; modeled scalable MongoDB schemas for scoring, chat history and skill taxonomies.
- Led end-to-end architecture, deployment, production operations, incident response and platform reliability as the sole technical lead.

Software Engineer

05/2025 – 06/2026

VOIS

Cairo, Egypt

- Developed and maintained enterprise-grade web platforms using React and Node.js in a cloud-native environment.
- Designed reusable UI components following Atomic Design and modern frontend best practices.
- Built and maintained CI/CD pipelines with Azure DevOps and GitHub Actions; owned pipeline debugging and workflow optimization, reducing build failures and deployment friction.
- Integrated Datadog and DevLake to deliver accurate end-to-end DORA metrics and engineering insights.
- Worked extensively with AWS services and Kubernetes, managing deployments and operations with kubectl; optimized DynamoDB queries for performance and cost.
- Extended Backstage with custom plugins and components to improve developer experience.

Full Stack Engineer

06/2024 – 05/2025

HerronTech

Boston, USA (Remote)

- Delivered responsive, production web applications end to end with React, Node.js and MongoDB on Google Cloud and AWS.
- Built dynamic, user-friendly interfaces following Atomic Design principles, in JavaScript and TypeScript.
- Shipped well-documented code with comprehensive unit tests, collaborating within Agile teams to deliver on schedule.

EDUCATION

9-Month Diploma, Open Source Application Development <i>Information Technology Institute (ITI)</i>	2023 – 2024 Cairo, Egypt
Complete Web Development Program <i>The App Brewery</i>	2022 – 2023 Online
Bachelor of Engineering <i>Ain Shams University</i>	2017 – 2022 Cairo, Egypt

SKILLS

Languages:	JavaScript, TypeScript, Python, Java, C, C++, PHP, Ruby, Bash
AI & LLM:	Claude Agent SDK, Anthropic API, multi-agent orchestration, embeddings & vector search, reranking, prompt caching, batch APIs
Backend:	Node.js, Express, NestJS, Next.js, Django, Ruby on Rails, Laravel, REST APIs, webhooks, RBAC
Frontend:	React, Next.js, Angular, Vue, Tailwind CSS, Material UI, shadcn/ui, Bootstrap
Databases:	MongoDB, PostgreSQL, MySQL, DynamoDB, Firebase
Cloud & DevOps:	Google Cloud Run, Cloud Build, AWS, Kubernetes, Docker, GitHub Actions, Azure DevOps, Datadog, Backstage, Linux
Practices:	System design, unit testing, OOP, data structures & algorithms, design patterns, SOLID, Agile

PROJECTS

Bazaar — <i>E-commerce</i>	Live · Frontend · Backend
• Django + MySQL backend and React/TypeScript frontend with Stripe payments and access/refresh-token authentication.	
WebWeave — <i>Social media platform</i>	Live · Code
• MERN social network with real-time notifications and secure JWT sessions, styled with Material UI.	
Threads — <i>Twitter clone</i>	Live · Code
• Next.js, TypeScript, shadcn/ui and Tailwind CSS with Clerk authentication, webhooks and UploadThing image uploads; deployed on Vercel.	
Good Reads — <i>Bookstore</i>	Live · Frontend · Backend
• Angular 17 + Node/Express/MongoDB bookstore with an admin panel, Cloudinary media hosting and JWT auth.
